

Edwin Julian

Front-End Engineer | React, Next.js, D3.js, TypeScript, Tailwind CSS

Remote (Open to Global) · English (Professional)

edjulsin@gmail.com | edjulsin.dev | github.com/edjulsin | linkedin.com/in/edjulsin

Professional Summary

Product-focused Front-End Engineer experienced in building **interactive web applications** that support **core business operations** and improve **digital product experiences**. Skilled in **React, Next.js, TypeScript, Tailwind CSS** and **D3.js**, with a focus on **performance optimization, scalable architecture**, and **highly interactive data-driven UI systems**. Experienced in both independent products and collaborative remote teams, delivering reliable front-end solutions that improve usability, streamline workflows, and power critical business functions.

Technical Skills

Frontend & UI Systems

React, Next.js (App Router), JavaScript(ES6+), TypeScript, HTML5 Canvas, RxJS, Jotai, D3.js, Tailwind CSS, SASS, Radix UI, Figma

Backend & Platform

Supabase (PostgreSQL, Auth, RLS, Storage), REST APIs, GraphQL, Node.js, Express.js, Docker, Vercel, Redis, Mysql, MongoDB

Architecture & Quality

State Management Design, Real-Time Systems, Performance Optimization, FP, CI/CD, Git, GitHub Actions, Webpack, Vite, Vitest, Playwright, SEO, Core Web Vitals, WCAG, Biome, ESLint, Copilot

Professional Experience

FINNS Beach Club - Product Engineer

Remote

January 2026 – April 2026

Engineered a booking engine with an interactive seat chart designed to enhance user experience and performance in booking processes, reducing booking friction by 50%.

Katt Interior - Full Stack Engineer

Remote

January 2025 – January 2026

Designed and developed a CMS and visual editor for creating customizable, SEO-friendly pages that increase brand visibility while making content management workflows cost-efficient and smooth.

Independent Development

Krypton - Front-End Engineer

Onsite

January 2021 – Ongoing

Building a real-time trading and charting platform featuring interactive visualizations and high-performance streaming interfaces designed to help traders make faster, data-driven decisions in fast-moving markets.

Selected Projects

Krypton — Real-Time Trading & Charting Platform ([Live Demo](#))

React, RxJS, D3.js, HTML5 Canvas, Webpack, Express

A TradingView-class financial visualization dashboard with fully customizable real-time charts, advanced interactivity, and low-latency streaming data rendering.

- Architected and built a **TradingView-class real-time charting system** from first principles, handling high-frequency market data and complex user interactions.
- Designed **RxJS-based streaming pipelines** for WebSocket data ingestion, implementing **reconnection and retry strategies** alongside **lazy loading, multi-chart synchronization, and multi-timeframe analysis**.
- Implemented a **high-performance canvas rendering pipeline** with **programmatic and gesture-driven pan/zoom**, responsive layouts, and mobile optimization.
- Developed a **configurable charting framework** (scales, indicators, themes, overlays) and a custom **color picker & popover system** for advanced visualization control.

FINNS — Booking Engine & Interactive Seat Chart ([Live Demo](#))

Next.js, TypeScript, D3.js, Tailwind CSS, Radix UI, Figma

An interactive real-time seat map system for booking platforms, featuring zoomable map-like navigation, dynamic seat selection, and mobile-optimized high-conversion user flows.

- Developed an **interactive real-time seat map chart** with smooth UI transitions and responsive feedback to improve perceived performance, enabling intuitive navigation and mobile-friendly experience.
- Built a **conversion-focused booking engine** with optimized seat selection UX using **carousels and collapsible components** to reduce cognitive load and improve decision flow.
- Engineered a **non-blocking, adaptive UI system** with **dark theme and focus mode** to reduce **booking friction** and **cognitive overload** across devices.
- Implemented **smart selection features** (best available, filtering) and **shareable booking state via URL**.

Katt — CMS & Visual Blog Editor ([Live Demo](#))

Next.js, TypeScript, Supabase, Tailwind CSS, Radix UI

A custom CMS and drag-and-drop visual editor for an image-heavy interior design platform with SEO-friendly page generation and an optimized image pipeline for instant page loads.

- Led the architecture and development of a **production-grade CMS**, owning the system across **frontend, data modeling, authentication, authorization, testing, and deployment**.
 - Designed and built a **drag-and-drop visual editor** with a custom layout engine, image crop/resize tools, and responsive grid generation, enabling fully customizable and **SEO-optimized** pages.
 - Optimized **image-heavy rendering paths** using **Next.js Image, ISR, and Core Web Vitals** tuning, significantly improving load performance without sacrificing visual quality.
 - Designed **secure, multi-role collaboration workflows** using **Supabase Row Level Security (RLS)** and fine-grained permission models.
-

Education

Full Stack Web Development Certification

freeCodeCamp

January 2019 – January 2021

Bachelor of Economics

Parahyangan Catholic University

August 2010 – March 2016
